

Darts for Windows

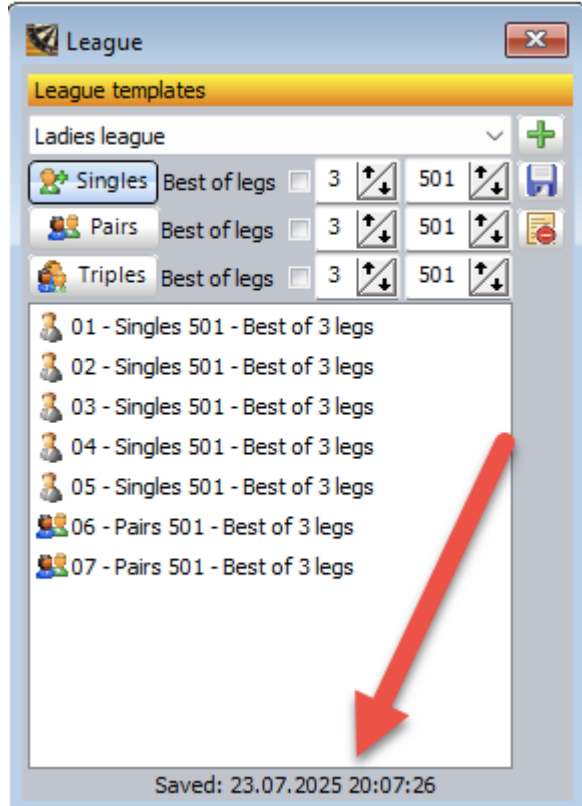

Setting up a Ladies Super League Match

Darts for Windows has a league option where you can create your own template as a mix of any combination of singles, pairs and triples.

Follow the below steps to create the template for 5 singles & 2 pairs and use it to create a match. (Make sure you have added at least 2 players to the database before starting)
Click [this link](#) to learn how to add team names and players to the database.

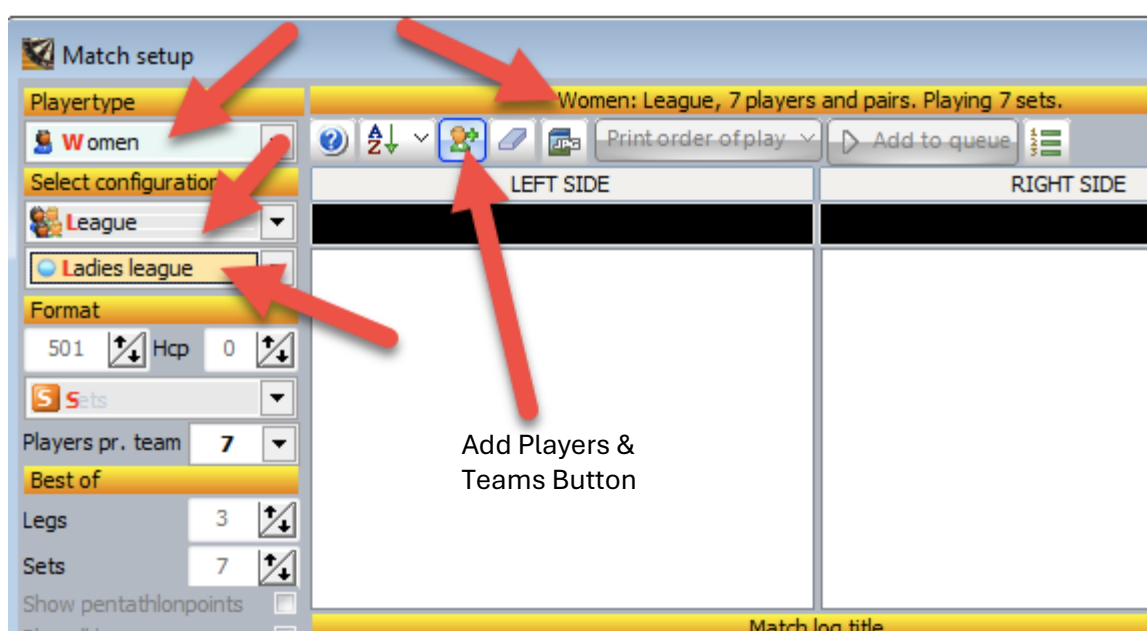

Set the number of legs to best of 5 in both singles and pairs, click the singles button 5 times and the pairs button two times, then save the template.

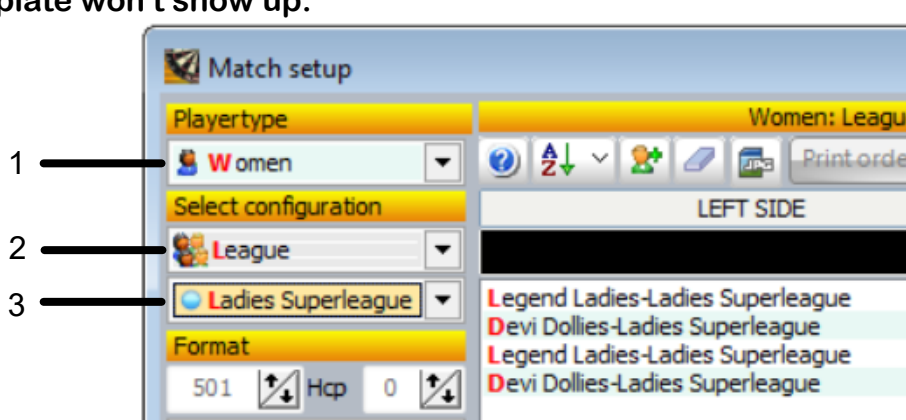

That's the template completed.

When you start a new league match, you select the template first, then setup the two teams.

Open the Match Setup window by clicking on New Match or by pressing CTRL+N. Select Women first, then League (not Super League) & then the template you have created (Ladies League in this example). Then click the Add Players & Teams Button.

Make sure you select these 3 options in the correct order or the template won't show up.

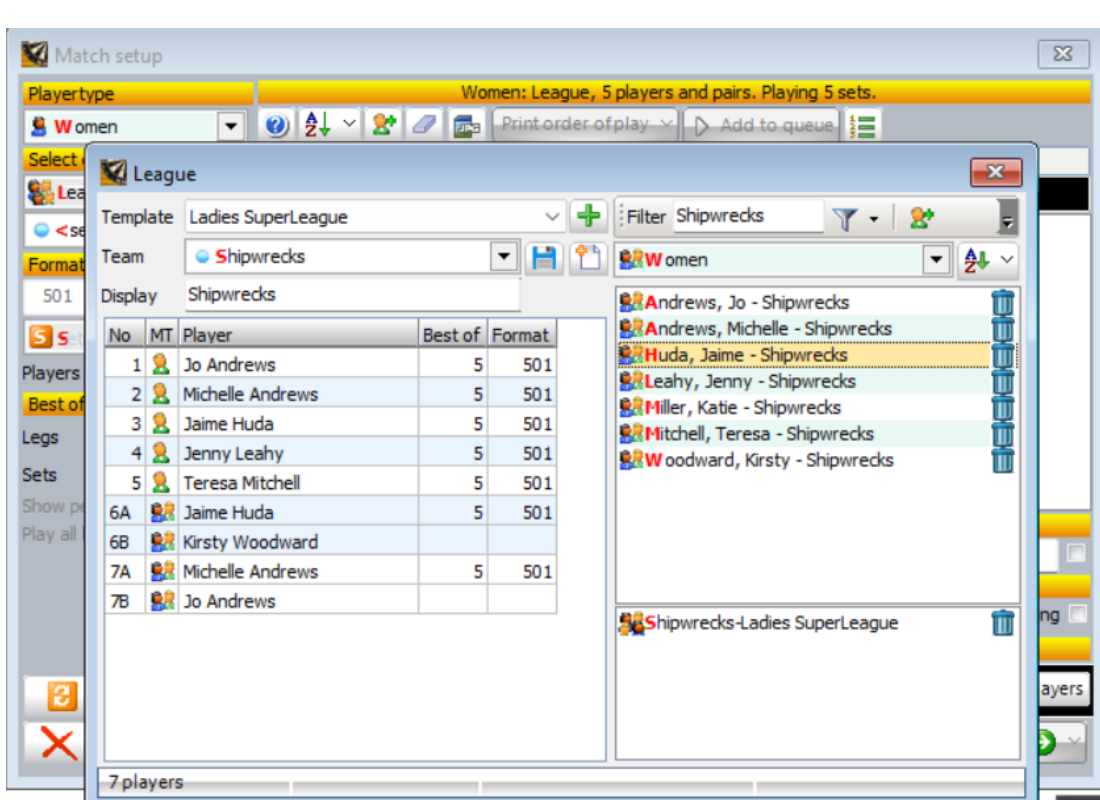

Change the drop down box on the right from Mens to Women & you will see all your saved players appear below.

Then just double click on each name in order of play to populate the team list on the left.

When the team is complete click the 'Save' button & the saved team will appear in the bottom right.

Then click the 'New' button to clear the team & prepare the second team.

Click the 'X' in the top right hand corner when done to return to the match setup window.
